Nonenylsuccinic Anhydride (NSA) is a long-chain olefinic dicarboxylic anhydride that is used in the production of a variety of chemicals, including lubricants, surfactants, and resins. The NSA market refers to the market for this organic compound.

NSA is a highly reactive compound that can be used as a raw material for the production of a variety of chemicals. It is commonly used in the production of lubricants, metalworking fluids, and gear oils, as well as surfactants and emulsifiers for use in paints, coatings, and resins. NSA is also used as a curing agent for epoxy resins and as a crosslinking agent for polyester resins.

The NSA market is driven by the increasing demand for high-performance lubricants and surfactants in the automotive and industrial sectors. The rise in demand for more efficient and durable lubricants and surfactants is driving the demand for NSA. The growing trend towards eco-friendly and sustainable chemicals is also expected to drive the growth of the NSA market in the coming years.
