Abstracts

The global Nonionic Polyacrylamide market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Nonionic polyacrylamide is a water-soluble polymer. Because its molecular chain contains a certain number of polar groups, it can bridge between particles by adsorbing solid particles suspended in water or agglomerate particles to form large flocs through charge neutralization. Therefore, it can accelerate the settling of particles in the suspension, and has a very obvious effect of accelerating solution clarification and promoting filtration. It is suitable for sludge dewatering, organic sewage treatment, paper making enhancement, oilfield chemical additives, textile sizing, etc.

This report studies the global Nonionic Polyacrylamide production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Nonionic Polyacrylamide, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
