Abstracts

According to our (Global Info Research) latest study, the global Nonpolarizing Beamsplitter (NPBS) market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Each prism in nonpolarizing beamsplitters has a different refractive index and geometry. When the incident beam passes through the nonpolarizing beam splitting prism, due to the different refractive indices of different wavelengths of light in different media, the beam will be bent according to its wavelength and finally separated into different colors or wavelengths.

The nonpolarizing beamsplitter is composed of a pair of precision high-tolerance right-angle prisms and a metal dielectric film on the hypotenuse of one of the prisms. Its low polarization depends on the metal dielectric film layer so that the error between the transmittance and reflectance of S and P polarized light is within 5%. Unlike polarizing beamsplitters, the nonpolarizing beamsplitter does not confine or adjust the polarization state of the incoming beam.
