Abstracts

The global Nonpolarizing Beamsplitter (NPBS) market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Each prism in nonpolarizing beamsplitters has a different refractive index and geometry. When the incident beam passes through the nonpolarizing beam splitting prism, due to the different refractive indices of different wavelengths of light in different media, the beam will be bent according to its wavelength and finally separated into different colors or wavelengths.

The nonpolarizing beamsplitter is composed of a pair of precision high-tolerance right-angle prisms and a metal dielectric film on the hypotenuse of one of the prisms. Its low polarization depends on the metal dielectric film layer so that the error between the transmittance and reflectance of S and P polarized light is within 5%. Unlike polarizing beamsplitters, the nonpolarizing beamsplitter does not confine or adjust the polarization state of the incoming beam.

This report studies the global Nonpolarizing Beamsplitter (NPBS) production, demand, key manufacturers, and key regions.
