Battery separators are crucial components in batteries as they separate the anode and cathode while allowing ion flow, preventing short circuits and thermal runaway. Nonwoven battery separators are fibrous membranes made of randomly arranged fibers, making them porous, stable, and electronically insulating. Currently, films/membranes are preferably used as battery separators and account for more than 99% share of the total battery separator market. Films are low-cost options and are extremely used in lithium-ion batteries across regions.
