The global Nonwoven Geotextile Tube market size is expected to reach \$ 1355 million by 2032, rising at a market growth of 6.2% CAGR during the forecast period (2026-2032).

In 2025, global Nonwoven Geotextile Tube production reached approximately 110.26 million m², with an average global market price of around US\$7.8 per m².

The gross profit margin of major companies in the industry is between 18% – 32%.

In 2025, the global production capacity of Nonwoven Geotextile Tube was approximately 147.01 million m².

Nonwoven Geotextile Tube is a tubular geosynthetic product made from nonwoven geotextile materials and used for dewatering, sediment containment, shoreline protection, and environmental engineering. It allows water to pass through while retaining solids, making it suitable for sludge treatment, dredging, and erosion control.

The industrial chain includes upstream polypropylene or polyester fibers, nonwoven fabrics, sewing threads, additives, and packaging materials. Midstream covers fiber forming, needle punching, tube sewing, seam reinforcement, testing, and packaging. Downstream applications mainly include sludge dewatering, dredging, coastal protection, riverbank stabilization, wastewater treatment, and civil engineering projects.

Infrastructure construction, ecological river regulation and coastal erosion prevention drive the application expansion of nonwoven geotextile tubes. The product features high permeability, corrosion resistance and structural stability, suitable for sludge dewatering

and environmental remediation projects. Technical optimization of material tensile strength and aging resistance further enhances engineering service life.

This report studies the global Nonwoven Geotextile Tube production, demand, key manufacturers, and key regions.
