Abstracts

According to our (Global Info Research) latest study, the global Nonwoven Geotextiles market size was valued at US\$ 4243 million in 2025 and is forecast to a readjusted size of US\$ 6846 million by 2032 with a CAGR of 7.0% during review period.

Nonwoven Geotextiles is a type of geosynthetic material made primarily from polypropylene or polyester fibers through non-woven processes such as needle punching, thermal bonding, or hydroentanglement. They possess excellent permeability, filtration, separation, and certain reinforcement properties. They are widely used in road engineering, railways, dams, water conservancy projects, tunnels, and environmental protection projects to prevent soil mixing, facilitate drainage and filtration, and enhance structural stability. Due to their ease of installation, corrosion resistance, and relatively low cost, nonwoven geotextiles have become one of the commonly used functional materials in infrastructure construction. In 2025, global nonwoven geotextiles production reached approximately 2633.43 kilotons.

The nonwoven geotextiles market is primarily driven by the continued expansion of global infrastructure and water conservancy investments, along with increasing performance requirements for soil stabilization, filtration, drainage, and protection; meanwhile, accelerating urbanization, growing demand from roads, railways, and landfill engineering, and a stronger focus on durability, installation efficiency, and lifecycle cost optimization are further supporting the adoption of needle-punched and spunbond nonwoven geotextiles across transportation, municipal, and environmental applications.
