According to our (Global Info Research) latest study, the global NOR Flash Memory market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

NOR Flash supports byte-by-byte programming, and data can be written directly at the location that needs to be changed without the need for overall erasure. Its programming and erasing operations are relatively simple. It has high reliability and durability and is suitable for storing critical data and firmware. It supports fast random access with low read error rates. Due to its fast read speed, low latency and good random access performance, NOR Flash is often used for boot memory, firmware storage and critical data storage, such as embedded systems and IoT devices. It is suitable for applications that quickly execute code and read critical data, while NAND Flash is suitable for applications that store large-capacity data. The choice of which flash memory technology to use depends on the requirements of the specific application, including storage capacity, read speed, longevity and cost considerations.
