## Abstracts

According to our (Global Info Research) latest study, the global Normally Closed Solenoid Valve market size was valued at US\$ 2701 million in 2024 and is forecast to a readjusted size of USD 3431 million by 2031 with a CAGR of 3.5% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

A normally closed solenoid valve is closed in its de-energized state. As with normally open valves, there are a variety of designs. A simple design has the armature low in the coil. When the valve is energized, the armature moves up towards the current's center, pulling a plunger or piston. This opens the valve. When the current stops, a spring pushes the armature back down to close the valve.
