Abstracts

The global Normally Open Fire Doors market size is expected to reach \$ 6049 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032).

In 2025, global production of normally open fire doors reached 41.72 million units, with an average selling price of US\$98 per door. Normally open fire doors are critical safety features that remain open for easy passage under normal circumstances, but automatically close in the event of a fire via a fire alarm system (combining automatic door closers, smoke detectors, and the fire alarm system) to effectively prevent the spread of fire and smoke. They are widely installed in critical locations such as stairwells, evacuation routes, machine rooms, and storage areas. The upstream raw materials mainly include steel, wood, and other primary materials, as well as fire-resistant core materials, sealing strips, and fire-resistant glass. The midstream, the core of the industry chain, is primarily responsible for the design, assembly, and production of fire doors. The downstream refers to the areas where the products are ultimately applied, covering commercial buildings (office buildings, shopping malls, hotels), residential buildings (stairwells and elevator lobbies in high-rise residential buildings), public facilities (hospitals, schools, airports, train stations), and industrial buildings (factories, warehouses). Gross profit margins range from 20% to 45%.

Regionally, the Asia-Pacific region holds a large market share due to rapid urbanization and infrastructure construction, while the North American and European markets maintain stable growth due to stringent fire safety regulations and the demand for renovation of older buildings. Furthermore, intelligentization, environmental friendliness, and aesthetic design have become core trends in industry development. By integrating IoT technology, normally open fire doors can achieve remote monitoring and intelligent management, while products using environmentally friendly materials and meeting

green building standards are increasingly favored by the market.
