Abstracts

According to our (Global Info Research) latest study, the global Normally Open Solenoid Valves market size was valued at US\$ 3276 million in 2025 and is forecast to a readjusted size of US\$ 4596 million by 2032 with a CAGR of 5.6% during review period.

Normally open solenoid valves are electromechanically actuated valves that remain open in their de-energized state and close or switch flow paths when the coil is energized. They consist of a solenoid coil, valve body, valve core, and return spring, and are characterized by fast response, high control accuracy, compact structure, and easy integration into automated control systems. They are widely used in industrial automation, pneumatic systems, medical devices, gas control, and water treatment applications. In safety-critical systems, the normally open configuration provides a fail-safe function by allowing flow continuity in the event of power loss.

In 2025, the global normally open solenoid valve market is estimated at approximately USD 3184.2million, with annual shipments of around 142 million units, resulting in an average selling price of about USD22.4 per unit. The market is expected to grow at a CAGR of approximately 5.7% over the next five years. Typical single-line production capacity ranges from 500,000 to 3,500,000 units per year, while industry gross margins generally fall between 28% and 45%.
