Abstracts

Two-shot, also referred to as dual-shot, double-shot, multi-shot and overmolding, is a plastic molding process in which two different plastic resins are molded together in a single machining cycle.

SCOPE OF THE REPORT:

This report focuses on the 2-shot Injection Molding in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

There are two phases of the two-shot molding process. The first is similar to traditional injection molding: A shot of resin is injected into a mold and cooled to form a solid part. In the second phase, the just-molded part is transferred to a second mold via a rotating platen or a robotic arm, and receives the second shot of resin – in, through or around certain parts of the first molded part, depending on the design. The two plastic resins then form a molecular bond and the multi-resin molded part is cooled and ejected.

The global market is highly fragmented with leading players holding small shares in the overall market dynamics.

The worldwide market for 2-shot Injection Molding is expected to grow at a CAGR of roughly 6.3% over the next five years, will reach 10800 million US\$ in 2023, from 7520 million US\$ in 2017, according to a new GIR (Global Info Research) study.
