Abstracts

This report studies the 3D Optical Surface Profilers (Profilometers) market. 3D Optical Surface Profilers (Profilometers) is a kind of profilometer using Non-contact technology. They are typically built on advanced optical microscopes, providing the dual advantages of excellent imaging and no contact with the surface being measured. They use a variety of light sources, usually using high-brightness LEDs, to illuminate the sample and sophisticated cameras to capture the images which are then converted into height information using techniques such as confocal microscopy or interferometry.

SCOPE OF THE REPORT:

This report focuses on the 3D Optical Surface Profilers (Profilometers) in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

In the coming years there is an increasing demand for 3D optical surface profilers in the regions of North America and Europe that is expected to drive the market for more advanced 3D optical surface profilers. Increasing of automotive fields expenditures, more-intense competition, launches in introducing new products, increasing of spending on general industry, retrofitting and renovation of old technology, increasing adoption of 3D optical surface profilers in developing countries will drive growth in global market. The consumption volume of 3D optical surface profilers is related to downstream industries and global economy. As there will always be some uncertain in the global economy in the following years, the growth rate of 3D optical surface profilers industry may not keep that fast. But it is surely forecasted that the market of 3D optical surface profilers is still promising.

The product average price declined in the past few years due to the technology development, the average price will keep the trend in the few future years due to increasing mature manufacturing technology and lowering cost of raw materials.

The worldwide market for 3D Optical Surface Profilers (Profilometers) is expected to grow at a CAGR of roughly 4.1% over the next five years, will reach 170 million US\$ in 2023, from 140 million US\$ in 2017, according to a new GIR (Global Info Research) study.
