## **Abstracts**

Historically, three variables have been used to define indoor air quality; temperature, humidity and CO<sub>2</sub>. The air quality sensors are consumer-grade, “internet of things”-enabled devices which often link with the smartphone or tablet. They are also known as intelligent indoor air quality monitors.

Residential air quality sensors are defined as standalone, self-contained devices utilized for indoor applications.

### **SCOPE OF THE REPORT:**

This report focuses on the Air Quality Sensor in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.
