Abstracts

An aircraft engine is the component of the propulsion system for an aircraft that generates mechanical power. Aircraft engines are almost always either lightweight piston engines or gas turbines, except for small multicopter UAVs which are almost always electric aircraft.

This report studies the Aircraft Piston Engines market. The first airplane engines were of the piston or reciprocating type and this type of engine is still in use today. Piston engines were the only type of aircraft engine until 1939 when the first turbine powered aircraft flew. Piston aircraft engines reached their zenith during World War II. Aircraft developed for the war added superchargers and were able to fly higher and faster than any planes in history.

SCOPE OF THE REPORT:

This report focuses on the Aircraft Piston Engines in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The North American market share, however, retained its position and decreased to 61.4%, which is its largest share of total deliveries in the past decade. The second largest market for Aircraft Piston Engine shipments in 2017 was the Europe region at 25.2%, closely followed by China at 11.2%.

The worldwide market for Aircraft Piston Engines is expected to grow at a CAGR of roughly -0.8% over the next five years, will reach 49 million US\$ in 2023, from 52 million US\$ in 2017, according to a new GIR (Global Info Research) study.
