SCOPE OF THE REPORT:

This report focuses on the All-Weather Landing Systems in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The ILS segment accounted for more than 80% of the total market share and is likely to dominate the all-weather landing systems market during the forecast period. Much of the segment's high growth comes from the high investments made by airport authorities on advanced runway lighting systems. Owing to their operational reliability and lower demand for aircraft instrumentation, ILS is extensively used by other navigation systems at the airport.

APAC is the largest region in the all-weather landing systems market and is anticipated to account for around 35% of the overall market share. The surging passenger traffic and the subsequent demand for air travel has led to a massive increase in the number of aircrafts. There are huge investments made on the development and modernization of technologies and safety systems at the airports, resulting in higher funds toward all-weather landing systems in the region. There have been several initiatives taken by governments in the region to enable high-speed broadband traffic throughout the airport with efficient landing approaches. Such developments towards safe landing options for customers will result in the overall growth of the market in APAC over the next few years.

The worldwide market for All-Weather Landing Systems is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
