Abstracts

Aluminum Chlorohydrate (ACH) is a high basicity, highly polymerized coagulant that has little effect on alkalinity and pH and is ideal for treating low alkalinity source waters. Due to its higher ion activity, ACH can generally be dosed at lower feed rates reducing sludge generation. ACH is also used as an additive in a broad range of industrial manufacturing applications where higher levels of aluminum (aluminum ion) are required.

SCOPE OF THE REPORT:

This report focuses on the Aluminum Chlorohydrate in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The major raw material for aluminum chlorohydrate is aluminum ash, activated bauxite, hydrochloric acid, etc. On the global market, supply of raw materials is full. Fluctuations in the price of the upstream product will impact on the production cost of aluminum chlorohydrate industry.

We tend to believe this industry is an emerging industry, and the consumption increasing degree will show a smooth growth curve. For product prices, the slow downward trend in recent years will maintain in the future as competition intensifies. Besides, prices gap between different brands will go narrowing gradually. Also, there will be fluctuation in gross margin.

The worldwide market for Aluminum Chlorohydrate is expected to grow at a CAGR of roughly 2.4% over the next five years, will reach 76 million US\$ in 2023, from 66 million US\$ in 2017, according to a new GIR (Global Info Research) study.
