Abstracts

Artificial tears are lubricant eye drops used to treat the dryness and irritation associated with deficient tear production in keratoconjunctivitis sicca (dry eyes). They are also used to moisten contact lenses and in eye examinations.

SCOPE OF THE REPORT:

This report focuses on the Artificial Tears in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

In consumption market, the growth rate of global consumption is smooth relatively.

North America is still the mainly consumption regions due to the advanced production technology and rapid development of economy.

The benefits of Artificial Tear are becoming better realized as more research is done. As far as their chemistry is concerned, they contain carboxymethyl cellulose, hydroxypropylmethyl cellulose and hydroxypropyl cellulose. The compound hydroxypropyl cellulose helps in thickening and stabilizing the tear film in the cornea, thus prolonging the tear film break-up time in dry eye patients.

We tend to believe this industry is a promising industry, and the consumption increasing degree will show a smooth growth curve. For product prices, the slow downward trend in recent years will maintain in the future as competition intensifies. Besides, prices gap between different brands will go narrowing gradually. Also, there will be fluctuation in gross margin.

The worldwide market for Artificial Tears is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017,

according to a new GIR (Global Info Research) study.
