Abstracts

Astronomical telescope is an optical instrument used to view heavenly bodies such as moon, stars, planets and distant objects. An astronomical telescope consists of two convex lenses: objective and eye piece. The objective is a convex lens of large focal length and large aperture. It is usually made of two convex lenses in contact with each other to reduce the chromatic and spherical aberrations. The eye piece is also a convex lens. Its focal length is smaller than that of the objective. It is also a combination of two lenses.

SCOPE OF THE REPORT:

This report focuses on the Astronomical Telescope in the global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Currently, the market of astronomical telescope is getting more and more concentrated.

The global largest producer of astronomical telescope, Synta, which holds three top brands of astronomical telescope (Celestron, Meade and Sky Watcher) and OEM for other brands, is announced to account for about 60% of the global total market.

As to the product types and applications of astronomical telescope, refracting telescope and reflector telescope are main types and entry-level telescope accounts for about 90% of the total market.

The worldwide market for Astronomical Telescope is expected to grow at a CAGR of roughly 8.6% over the next five years, will reach 290 million US\$ in 2023, from 180 million US\$ in 2017, according to a new GIR (Global Info Research) study.
