## Abstracts

Automatic tire inflation systems (ATIS) work to overcome one or more of the causes of tire underinflation by monitoring tire inflation pressure relative to a pre-set target and re-inflating tires whenever the detected pressure is below the target level. The tire inflation system not only increases vehicle mobility and reliability when moving, it also helps to ensure that a need for vehicle recoveries is avoided as far as possible. It also prevents unnecessary damage to fields. Moreover, simple adjustments to correct the air pressure ultimately reduce tire wear.
