Abstracts

Automotive Condenser is the other heat exchanger in a mobile A/C system. Nowadays, condensers are usually made of aluminum, but in the past, some were made of copper/brass. Condensers look very much like radiators, just a little thinner, and since they also depend on air flowing through them, are usually located in front of the radiator.

SCOPE OF THE REPORT:

This report focuses on the Automotive Condenser in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

At present, in United States, Japan and Europe, the automotive condenser industry is at a more advanced level, the world's most advanced enterprises are mainly concentrated in these regions. These foreign companies have more advanced equipment, strong R & D capability, the technical level is in a leading position. But foreign companies' manufacturing cost is relatively high, compared with Chinese companies, the manufacturing cost is a competitive disadvantage, as the Chinese automotive condenser manufacturers' technology continues to improve, their share in the international market is increasing, competitiveness in the international market will gradually increase.

Despite the presence of competition problems, due to the global recovery trend is clear, investors are still optimistic to the automotive condenser industry the future will still have more new investments enter the field. Along with the development of Chinese domestic equipment, Chinese domestic equipment has been very mature and advanced, and the performance distance has been shortened compared with the imported equipment.

The worldwide market for Automotive Condenser is expected to grow at a CAGR of roughly 1.2% over the next five years, will reach 5580 million US\$ in 2023, from 5210 million US\$ in 2017, according to a new GIR (Global Info Research) study.
