Abstracts

Automotive coolant, also known as antifreeze, is a liquid substance that circulates through an internal combustion engine and draws off excessive heat. The two most common chemicals used for this are ethylene and propylene glycol, both of which have lower freezing points than water (32° Fahrenheit or 0° Celsius). This allows the chemicals to flow freely even under cold winter conditions. Automotive Coolant also has a higher boiling point than pure water, which makes it ideal for summer use as well.

SCOPE OF THE REPORT:

This report focuses on the Automotive Coolant in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Recently, ethylene glycol and other type automotive coolant is the mainstream product, which take up a larger market share. While ethylene glycol type automotive coolant is toxic and corrosive, the product is harmful to engine. Propylene glycol type automotive coolant is environment-friendly. But cost of the product is high, and technology needs further exploration. Price of ethylene glycol type automotive coolant is relatively low compared to propylene glycol type automotive coolant.

Automotive coolant, especially the environment-friendly products, will be popular in the future. For the increasing demand of automotive coolant, investors will be optimistic about this area. While for the relatively permanent leading status of the major players, the new enters still face lots of challenges.

The worldwide market for Automotive Coolant is expected to grow at a CAGR of roughly 2.3% over the next five years, will reach 5640 million US\$ in 2023, from 5030 million

US\$ in 2017, according to a new GIR (Global Info Research) study.
