Abstracts

Automotive damper is an important part in vehicle's damping system. Automotive dampers are designed primarily to provide a much smoother ride by absorbing and damping feedback from the road. In general, it is a common device used in automobile suspension. The role of the automotive damper is to keep the car's tires in permanent contact with the road, helping to provide optimum grip, when cornering and braking. Without automotive damper, a car spring will extend and release the energy it absorbs from a bump at an uncontrolled rate until all of the energy originally put into it is used up. The automotive damper is generally used to control unwanted spring motion through a process known as dampening.

Each automotive damper contains a piston that slides through a cylinder. Hydraulic fluid on either side of the piston head provides the resistance against which the up-and-down motion of the wheels must work as it compresses and expands the automotive damper. A valve in the piston head, and typically another at the base of the cylinder, allow the fluid, or oil, to flow through as the unit expands and compresses. But when the compression is faster or greater, the oil can't squeeze through the valve fast enough, and it becomes pressurized. The more the oil is pressurized, the more it resists the piston's motion.

SCOPE OF THE REPORT:

This report focuses on the Automotive Damper in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. China is one of the largest suppliers of automotive damper with many domestic manufacturers and some plants built by international manufacturers like ZF, Tenneco,

Showa, KYB and Mando. Each international manufacturer may have a capacity over several hundreds.

The twin-tube design is most used on cars, light trucks, SUV's and vans. It's a cost effective and it can provide excellent handling & control characteristics for most driving conditions. The mono-tube design offers additional performance and can have a more aggressive ride.

The worldwide market for Automotive Damper is expected to grow at a CAGR of roughly 1.5% over the next five years, will reach 16800 million US\$ in 2023, from 15400 million US\$ in 2017, according to a new GIR (Global Info Research) study.
