Abstracts

A heat shield is designed to shield a substance from absorbing excessive heat from an outside source by either dissipating, reflecting or simply absorbing the heat. It is often used as a form of exhaust heat management.

SCOPE OF THE REPORT:

This report focuses on the Automotive Heat Shield in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Due to the large amounts of heat given off by internal combustion engines, heat shields are used on most engines to protect components and bodywork from heat damage. As well as protection, effective heat shields can give a performance benefit by reducing the under-bonnet temperatures, therefore reducing the intake temperature. Heat shields vary widely in price, but most are easy to fit, usually by stainless steel clips or high temperature tape.

The average price of the automotive heat shield is showing downstream trend, the gross margin is about 21% in 2016; it has the similar trend with price;

In the future, the total install ratio will still have increase trend, and the total consumption volume will have great influence by the automotive industries' development.

The worldwide market for Automotive Heat Shield is expected to grow at a CAGR of roughly 6.7% over the next five years, will reach 16500 million US\$ in 2023, from 11200 million US\$ in 2017, according to a new GIR (Global Info Research) study.
