Abstracts

Electric vehicles are gaining importance in modern times because of the rise in global fuel prices and alarming levels of air pollution. There is widespread concern about the negative effects of global warming. In such a scenario the rapid adoption of electric vehicles is seen as the most viable solution. The time taken to charge electric vehicles was one of the major concerns, but with the advent of wireless inductive charging this issue has been resolved. Inductive wireless charging is considered a major breakthrough as it has made the use of plugs and cords redundant. Inductive charging takes place when an electromagnetic field transfers energy between two coils.
