## Abstracts

Injector nozzle is a fine fuel sprayer which is utilized for injecting fuel into the engine. Injector nozzles, which sprays the fuel are bolted with nozzle-first, either onto primarily the inlet manifold or cylinder head and are angularly positioned so as to direct the spray towards the inlet valve. The fuel injector is one of the electronically-controlled valves. The fuel pump supplies pressurized fuel to the injector. The fuel pump opens and closes several times per second. The valve opens and the pressurized fuel squirts out through a nozzle, when the injector is energized. The primary function of the nozzle is to atomize the fuel by making a very fine mist of the fuel so that there would be complete and effective combustion of the fuel for deriving better efficiency.
