## Abstracts

Vehicle-to-X refers to an intelligent transport system where all vehicles and infrastructure systems are interconnected with each other.

This connectivity will provide more precise knowledge of the traffic situation across the entire road network which in turn will help: Optimize traffic flows, Reduce congestion, cut accident numbers, Minimize emissions.

V2X technology is based on 5.9GHz Dedicated Short Range Communication, a derivative of WiFi specifically defined for fast moving objects. It allows vehicles to communicate their state, such as their position and speed, to surrounding vehicles and infrastructures even in non-line-of-sight condition, such as behind a building or a curve.

### SCOPE OF THE REPORT:

This report focuses on the Automotive Vehicle to Everything (V2X) in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The continuing push to improve safety while reducing the emissions and energy consumption resulting from transportation is driving the development of a number of crucial technologies, including electrification and automated driving systems. One of the key enabling systems for the success of both is the provision of real-time data to vehicles, drivers, and pedestrians through vehicle-to-external communications (V2X) using dedicated short-range communications (DSRC).

Global demand for new vehicles is projected to continue growing over the next decade, particularly in developing markets where dense urbanization is already causing problems with traffic congestion, accident rates, and air quality. Even before there is

significant deployment of automated vehicles, V2X connectivity has the potential alleviate some of these issues. DSRC-based V2X systems are anticipated to be deployed by OEMs beginning in 2016 and see rapid expansion over the next decade. In addition to the embedded OEM systems on new vehicles, aftermarket retrofit systems and new smartphones with DSRC capability are expected to be adopted. According to QY Research, global revenue from sales of OEM and aftermarket V2X Communications is projected to reach more than \$6 billion by 2025. It is report that GM will be the first car maker to have a V2X system in a production vehicle, with their CTS Cadillac going into production at the end of 2016. Meanwhile in Europe, the Corridor Project will ensure that there is infrastructure in place for the early adopters. Deployment work is happening in parallel in the both the US and Europe, so it will be difficult to pinpoint exactly who deploys first – and even then there will only be months in it.

The worldwide market for Automotive Vehicle to Everything (V2X) is expected to grow at a CAGR of roughly 28.9% over the next five years, will reach 3940 million US\$ in 2023, from 860 million US\$ in 2017, according to a new GIR (Global Info Research) study.
