## Abstracts

Brake caliper is an essential component of disc braking system, which is one of the most common types of braking system found in cars and motorcycles. In a braking system, wheels are attached to discs or rotors, and the job of the caliper is to slow the wheels by creating friction with the rotors.

Inside each caliper is a pair of brake pads, which are like metal shoes lined with some kind of friction material. When the brake pedal is pressed, the master cylinder will force brake fluid into the caliper through a series of tubes or hoses. Then the connected pistons will push the brake pads against the rotor, creating the friction to stop or slow down the wheels.

Now, with excellent performance, disk braking system is selected by most cars, especially used in the front wheels. This report brake calipers refers automotive brake calipers type, while we can also offer any product survey report related to the Brake Calipers industry chain.
