Abstracts

Butyl acrylate is a clear colourless liquid with a characteristic fruity odor. It is readily miscible with most organic solvents. It is readily polymerized and displays a wide range of properties dependent upon the selection of the monomer and reaction conditions. Butyl acrylate is used in the production of homopolymers and co-polymers for use in water-based industrial and architectural paints, enamels, adhesives, caulks and sealants, and textile finishes. The reactivity of the molecule bond also yields applications as a chemical intermediate.
