Abstracts

Cable is made of two or more wires running side by side and bonded, twisted, or braided together to form a single assembly, the ends of which can be connected to two devices, enabling the transfer of electrical signals from one device to the other. Cables are used for a wide range of purposes, and each must be tailored for that purpose. Cables are used extensively in electronic devices for power and signal circuits. Long-distance communication takes place over undersea cables. Power cables are used for bulk transmission of alternating and direct current power, especially using high-voltage cable. Electrical cables are extensively used in building wiring for lighting, power and control circuits permanently installed in buildings. Since all the circuit conductors required can be installed in a cable at one time, installation labor is saved compared to certain other wiring methods.

The gap of price and properties between optical fiber cable and general cable is large. In this report, the optical fiber cable is not considered in the range of product.

SCOPE OF THE REPORT:

This report focuses on the Cable in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Cable is made of two or more wires running side by side and bonded, twisted, or braided together to form a single assembly, the ends of which can be connected to two devices, enabling the transfer of electrical signals from one device to the other. Cables are used for a wide range of purposes, and each must be tailored for that purpose. Cables are used extensively in electronic devices for power and signal circuits. Copper and aluminum are the conductor raw materials and polyurethane and polyvinyl

chloride is the outer sheath raw materials for the production of cable. Large and medium-sized companies purchase materials from the large-sized raw materials manufacturers. Some small-sized companies need to buy raw materials from distributors. With the development of cable, the raw materials manufacturers are also benefited from the cable industry in some extent.

The worldwide market for Cable is expected to grow at a CAGR of roughly 6.2% over the next five years, will reach 162000 million US\$ in 2023, from 112800 million US\$ in 2017, according to a new GIR (Global Info Research) study.
