Abstracts

Carbon nanotubes (CNTs) are tubular cylinders of carbon atoms that have extraordinary mechanical, electrical, thermal, optical and chemical properties. CNTs typically have diameters ranging from <1 nanometer (nm) up to 50 nm—a nanometer is one thousand millionth of a meter.

SCOPE OF THE REPORT:

This report focuses on the Carbon Nanotube (CNT) in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

In 2015, the US captured the first largest share of the CNTs sales market with 27.94%, while China ranked second with a sales market share with 26.63%, ahead of EU and Japan.

Multi-wall carbon nanotubes are the largest product segment, accounting for more than 92% share of the global carbon nanotubes market in 2015. Multi-wall carbon nanotubes consist of multiple layers of graphite/carbon that are superimposed and rolled one over the other to form a cylindrical and tubular structure.

However, a number of issues, including high costs, inconsistent quality across the supply chain, dispersion and compatibility with matrix materials, and toxicology still need to be addressed. Once these issues are resolved, growth in global CNTs demand is expected to accelerate in the next five years.

The worldwide market for Carbon Nanotube (CNT) is expected to grow at a CAGR of roughly 3.7% over the next five years, will reach 480 million US\$ in 2023, from 390 million US\$ in 2017, according to a new GIR (Global Info Research) study.
