Abstracts

Caster is a wheeled device typically mounted to a larger object that enables relatively easy rolling movement of the object. Circular shielding components, assembled on the sides of a wheel to protect the hub from threads and other foreign objects, which may prevent free rotation of the wheel. Casters are found virtually everywhere, from office desk chairs to shipyards, from hospital beds to automotive factories. They range in size from the very small furniture casters to massive industrial casters, and individual load capacities span 100 lbs or less to 100,000 lbs. Wheel materials include cast iron, plastic, rubber, polyurethane, forged steel, stainless steel, aluminum, and more.
