Abstracts

Catalyst is widely used in different chemical processes in refineries, chemical & petrochemical plants, environmental processes, energy plants, and so on. The catalyst gradually loses its activity and needs to be replaced. The spent catalyst can be disposed of or recycled. Recycling is one of the best options for the catalyst users as it provides benefits of cost optimization and retaining an environment friendly image. Increasing cost of new catalyst, high disposal cost, and stringent environmental regulations also enforce the catalyst user to go for recycling their catalysts. Regeneration is a suitable recycling option which helps to restore the catalytic activity to a certain level.

SCOPE OF THE REPORT:

This report focuses on the Catalyst Regeneration in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

STEAG SCR-Tech is the largest manufacturer in the world, whose production reached 4830 m³ in 2015. The global catalyst regeneration industry is relatively concentrated except China. However, with the advantage of policy support and cost saving, the catalyst regeneration industry would develop fast.

The price of catalyst regeneration is decreasing year by year from 2235 USD/ m³ in 2011 to 1730 USD/ m³ in 2016. The product profit margin is relatively low, which results from not being industrialized in large-scale. Later, with many companies producing in large-scale, the market prospect is very good. So we predict gross margin would rise. In the next few years, we predict that price will continue to decline. As competition intensifies, prices gap between different brands will go narrowing.

The worldwide market for Catalyst Regeneration is expected to grow at a CAGR of roughly 16.9% over the next five years, will reach 210 million US\$ in 2023, from 84 million US\$ in 2017, according to a new GIR (Global Info Research) study.
