## Abstracts

A ball valve is a device with a spherical closure unit that provides on/off control of flow. The sphere has a port, also known as a bore, through the center. When the valve is positioned such that the bore is aligned in the same direction as the pipeline, it is in open position and fluid can flow through it. When rotated 90 degrees, the bore becomes perpendicular to the flow path, meaning the valve is closed and the fluid cannot pass through.

### SCOPE OF THE REPORT:

This report focuses on the Ceramic Ball Valve in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. For industry structure analysis, the Ceramic Ball Valve industry is relatively concentrated. These manufacturers range from large multinational corporations to small privately owned companies compete in this industry. The top five producers account for about 55 % of the revenue market. China occupied 28.05% of the sales market in 2016. It is followed by USA and Europe, which respectively account for around 20.55% and 17.69% of the global total industry. Other countries have a smaller amount of sales market share. For price trend analysis, a key variable in the performance of Ceramic Ball Valve producers is raw material costs, specifically the speed at which any increase can be passed through to customers. For forecast, the global Ceramic Ball Valve revenue would keep increasing with annual growth rate with 2~6%. We tend to believe that this industry still has a good future, considering the current demand of Ceramic Ball Valve.

The worldwide market for Ceramic Ball Valve is expected to grow at a CAGR of roughly 4.0% over the next five years, will reach 100 million US\$ in 2023, from 81 million US\$ in 2017, according to a new GIR (Global Info Research) study.
