Abstracts

Chlorosilane is a group of reactive, chlorine-containing chemical compounds, related to silage and used in many chemical processes. Each such chemical has at least one silicon-chlorine bond. Chlorosilane mainly applied to polycrystalline silicon and organosilicons.

SCOPE OF THE REPORT:

This report focuses on the Chlorosilane in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Chlorosilane industry belongs to a part of the chemical field and it also is dangerous chemicals. So the industry has more influence on the environment. It needs much more research on the Chlorosilane product, the performance of the product abroad is better than the developing countries.

The production and the capacity of chlorosilane product are decreasing from 2010 to 2015. The application of Chlorosilane is relatively limited all over the world.

The price of chlorosilane is lower year by year from 2011 to 2015; its price is lowest in 2012 and from then on, the price is relatively stable year by year. The price is at about 750-800 USD/MT in 2015. The product profit margin is about 15-20% and it also descends in recent years. Many manufacturers close down in 2012 because of ultra-low profit margins.

The main production areas are in China, USA and Europe while the main consumption areas also in those areas, China is the largest consumption and production areas, but the performance of the product is good in USA, the export and import of chlorosilane product is little and this is because that the product belongs to dangerous chemicals,

every countries have strict requirements on its transportation

There are many manufacturers producing chlorosilane in the world before 2012 and also many research and development institutions are researching and development on the chlorosilane product. The largest company occupies about 14% which is the most part of the production of chlorosilane.

It is expected that less and less manufacturers enter into this field, the capacity and the production will be decreasing steady, global growth rate is at about 10% while China growth rate is at about 16%, China will occupy more large share in production of chlorosilane. The downstream manufacturers are developing the upstream industry, it will expected that the major company will have the whole industry chain, the chlorosilane industry that only manufacturing this product maybe disappear.

The worldwide market for Chlorosilane is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
