## Abstracts

According to our (Global Info Research) latest study, the global Non Rising Stem Gate Valves market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Non Rising Stem Gate Valves are a type of valve used to control fluids (usually liquids or gases) whose stem or stem does not rise or fall during operation. Instead, the valve opens and closes by turning a valve handle or gear, and the interior of the valve core is designed to control the flow of liquid or gas. This design is particularly useful when space needs to be saved or when used underground or in deep wells, as it does not require vertical space to accommodate the rising rod.

Non Rising Stem Gate Valves are commonly used in a variety of industrial applications, including water supply, oil and gas transmission, and chemical and pharmaceutical industries.
