Abstracts

Circular Connector applies to any electrical connector possessing multipin interconnects with cylindrical contact housings and circular contact interface geometries. Circular connectors are selected for ease of engagement and disengagement, their ability to conveniently house different types of contacts, their wide range of allowable contact voltages and currents, their ease of environmental sealing and their rugged mechanical performance. The primary disadvantage of the circular design is loss of panel space when used in arrays when compared to rectangular connectors.

SCOPE OF THE REPORT:

This report focuses on the Circular Connectors in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Globally, the Circular Connectors industry market is not that concentrated as the manufacturing technology of Circular Connectors is relatively much more mature than some high-tech equipment.
