Abstracts

This report studies the Clean Coal Technology market. Clean coal technology is a collection of technologies being developed to attempt to help lessen the environmental impact of coal energy generation and to mitigate worldwide climate change. When coal is used as a fuel source, the gaseous emissions generated by the thermal decomposition of the coal include sulfur dioxide (SO₂), nitrogen oxides (NO_x), mercury, and other chemical byproducts that vary depending on the type of the coal being used. These emissions have been established to have a negative impact on the environment and human health, contributing to acid rain, lung cancer and cardiovascular disease. As a result, clean coal technologies are being developed to remove or reduce pollutant emissions to the atmosphere.

SCOPE OF THE REPORT:

This report focuses on the Clean Coal Technology in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Clean Coal Technology is mainly classified into the following types: Combustion Technology, Gasification Technology and Enabling Technology. Combustion Technology is the most widely used type which takes up about 60.67 % of the total in 2016 in Global

Asia Pacific is expected to be one of the key markets to invest heavily in global clean coal technology market. The implementation of clean coal technology in Asia Pacific has been driven by highly polluted countries such as China and India which are investing in global clean coal technology market to improve plant efficiency and reduce fuel cost.
