Abstracts

Conductive adhesive (also known as electrically conductive adhesive) is a glue that is primarily used for electronics. The conductive component can be silver, copper or graphite. Other conductive materials are possible but unusual. The sticky component can be a varnish (of one component) or a synthetic resin (of one or two components).

SCOPE OF THE REPORT:

This report focuses on the Conductive Adhesive in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

As Chinese overall economic downward trend in the past few years, and international economic situation are complicated, in the next few years there will be many uncertainties. Currently in the domestic market, some highly sophisticated areas of conductive adhesive used are mainly dominated by imports: TeamChem Company, Ablistick Company, 3M Company occupied the most IC and LED market, Sumitomo and Taiwan Yihua are also involved in these fields. Japan Three-Bond Company controls the entire quartz crystal resonator conductive adhesive. Domestic conductive adhesive is mainly used in some low-end products; this market is mainly occupied by the Shanghai Research Institute of Synthetic Resins.

Despite the presence of competition problems, due to the clear global recovery trend, investors are still optimistic about this area, in future still more new investment will enter into this field. Technology and cost are two major problems.

Along with the development of Chinese domestic equipment, Chinese domestic equipment has been very mature and advanced, and the performance distance has

been shortening compared with the imported equipment.

The worldwide market for Conductive Adhesive is expected to grow at a CAGR of roughly 4.9% over the next five years, will reach 270 million US\$ in 2023, from 200 million US\$ in 2017, according to a new GIR (Global Info Research) study.
