Abstracts

Conductive polymers have a wide variety of applications in various industries, ranging from production of medicine, healthcare, renewable energy devices, such as photovoltaic cells, to manufacturing of display materials, chip packaging, sensors, plastic transistors, and ultra-capacitors. Conductive polymers are used in a wide range of electrical appliances such as energy devices, electronics, and actuators, and as an alternate to inorganic semiconductor counterpart.

SCOPE OF THE REPORT:

This report focuses on the Conductive Polymers in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The growth of the global conducting polymers market is mainly driven by the increasing demand for advancements in miniaturization of electronic components. Compact electronic devices are comparatively faster than larger devices as the signals in compact devices do not have to travel as far as in the larger devices. Lower costs, greater density, and higher speed are the additional benefits of miniaturization.

At present, there are a mass of manufacturers in the market. Major manufacturers in the market are 3M, RTP Company, Parker Hannifin, Sumitomo Chemical, etc. Major manufacturers are mainly concentrated in North America, Europe.

The North America region is the largest market for conducting polymers, which accounting for 42.26 % global volume market share in 2017. The North America conducting polymers market is largely driven by the increasing construction activities along with higher real disposable income of consumers. This is primarily due to the increased demand for electrostatic coatings on door panels and window panes, along

with the sensors required in the building & construction industry. In addition, the high adoption rate of electroactive polymers in electronics, solar energy, healthcare and automotive industries in light of the immense potential of R&D infrastructure in the U.S. and Canada is expected to have a positive impact.

The worldwide market for Conductive Polymers is expected to grow at a CAGR of roughly 5.8% over the next five years, will reach 5470 million US\$ in 2023, from 3900 million US\$ in 2017, according to a new GIR (Global Info Research) study.
