Connected wearable patches include patches, tattoos, or small devices that are affixed to the skin and worn for a limited period of time, ranging from an hour to several weeks. The patches also have an element of wireless connectivity, and have a medical, health, or wellness purpose that can range from monitoring physiological data to delivering medication.

This report focuses on the Connected Wearable Patches in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The drive forces make connected wearable patches commercial are a growth in the number of people with chronic diseases, aging populations and rising healthcare costs. Due to the slow recovery of global economy, more and more governments, insurance companies and care providers are taking this kind of product as a substitution of traditional way to monitor, diagnose, and treat patients in order to save medical expense.
