Abstracts

Controlled-release fertilizers are fertilizers encapsulated inside a coat that slowly releases nutrients over time. This slow release increases the probability that nutrients will be taken up by the roots. This results in fewer losses (i.e., greater nutrient-use efficiency) and reduced pollution potential.

Controlled-release fertilizers are also called coated or encapsulated fertilizers because the release is controlled by a polymer coating that contains a water-soluble fertilizer. Nutrients are released out of coated fertilizer through osmosis at a rate that is positively correlated with increased temperature.

SCOPE OF THE REPORT:

This report focuses on the Controlled-release Fertilizers in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Sulphur-coated urea is the first generation product, and now it is replaced by the polymer/sulphur-coated products. While the polymer-coated products also occupy considerable market share.

In the market, the production of local manufacturers can not meet the local demand. So there are still mass products need to be introduced from abroad. In recent years, some local manufacturers like Haifa have expanded their capacity.

In the consumption market, professional application is the most important application, followed by consumers. In addition, the market share of products for agriculture is least, compared with the other two major applications.

The worldwide market for Controlled-release Fertilizers is expected to grow at a CAGR

of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
