## Abstracts

This report studies the Curing Bladder market, curing bladder is used in the process of manufacturing tyres.

Curing is the process of applying pressure to the green tire in a mold in order to give it its final shape, and applying heat energy to stimulate the chemical reaction between the rubber compounds and other materials.

In this process the green tire is automatically transferred onto the lower mold bead seat, a rubber bladder is inserted into the green tire, and the mold closes while the bladder inflates. As the mold closes and is locked the bladder pressure increases so as to make the green tire flow into the mold, taking on the tread pattern and sidewall lettering engraved into the mold. The bladder is filled with a recirculating heat transfer medium, such as steam, hot water, or inert gas. At the end of cure the pressure is bled down, the mold opened, and the tire stripped out of the mold.

### SCOPE OF THE REPORT:

This report focuses on the Curing Bladder in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The Automobile market will remain the largest outlet for tire demand, accounting for 62% of the total in 2017. Demand for Curing Bladder in this market will rise 6.24 percent per year to 6.8 million units. Growth in demand for light vehicle Curing Bladder will be driven by the expansion of the middle class in industrializing countries, which will contribute to increased vehicle ownership. Gains in sales of medium and heavy vehicle Curing Bladder will be fueled by increased commercial trucking activity.

Almost 44% of all Curing Bladder are sold in the Asia/Pacific region, and this region is

forecast to post the fastest growth in demand through 2023. China will remain one of the fastest growing national markets for Curing Bladder. Several other countries in the Asia/Pacific region are also projected to achieve rapid gains in tire demand, particularly India, Indonesia, and Thailand. Japan, which holds the world's fourth largest market for Curing Bladder, will post disappointing sales and actually experience a contraction in demand over the forecast period. Growth in demand for Curing Bladder in North America and Western Europe will post meager gains of about 3 percent annually through 2023. Replacement tire markets in these regions are mature, as vehicle ownership rates are already very high.

The worldwide market for Curing Bladder is expected to grow at a CAGR of roughly 4.0% over the next five years, will reach 550 million US\$ in 2023, from 430 million US\$ in 2017, according to a new GIR (Global Info Research) study.
