Abstracts

This report studies the CVD Diamond market, CVD is an acronym for chemical vapor deposition. This means that a material is deposited from a gas onto a substrate and that chemical reactions are involved. CVD Diamond is a synthetic diamond prepared by CVD techniques. Generally, low pressure of CVD diamond is applied.

SCOPE OF THE REPORT:

This report focuses on the CVD Diamond in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Based on type, the global CVD diamond market has been segmented into polished and rough types. Rough CVD diamond segment contributed for the largest share in the market, Polished CVD diamond segment contributed for the market share is about 47%, by both revenue and volume, owing to increasing applications as gemstone in jewelry industry. A polished high quality CVD diamond costs 30% to 40% less than the mined diamond.

Stone CVD diamonds are preferred by both gemological and industrial customers owing to their hardness, compatibility with cutting process and larger surface area. CVD diamonds are grown in lab and they are completely free of conflict. Such factors aided the segment to be the largest segment of the CVD diamond market in 2017.

The worldwide market for CVD Diamond is expected to grow at a CAGR of roughly 9.4% over the next five years, will reach 170 million US\$ in 2023, from 100 million US\$ in 2017, according to a new GIR (Global Info Research) study.
