Abstracts

Cyclopentane is a highly flammable alicyclic hydrocarbon with chemical formula C_5H_{10} , consisting of a ring of five carbon atoms each bonded with two hydrogen atoms above and below the plane. It occurs as a colorless liquid with a petrol-like odor. Its melting point is $-94^{\circ}C$ and its boiling point is $49^{\circ}C$.

SCOPE OF THE REPORT:

This report focuses on the Cyclopentane in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Cyclopentane is a highly flammable alicyclic hydrocarbon which is principally used as a blowing agent in foam manufacture, forming an excellent substitute for CFCs. It is recognised by environmental groups as having zero ozone depletion potential, making it a better alternative to HCFC 141-b. High stability of cyclopentane blown foams also yields performance benefits over CFC 11 foams, even where these are still permitted to be used. The increased consumption of cyclopentane is expected to continue during the remaining years of the forecast period of 2017-2023. We tend to believe that this industry still has a bright future, considering the current demand of foam agents. The product price will keep a stable trend in the next five years. Similarly, there will be fluctuations in gross margin.

The worldwide market for Cyclopentane is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
