Abstracts

A cystoscope is a medical device that an urologist can use to look inside a patient's urethra and bladder in a procedure called a cystoscopy. This may be done for diagnostic purposes, to collect information about a patient's condition, or for therapeutic purposes, where the doctor will perform a procedure to correct an issue like stones in the bladder. There are several different cystoscope designs and the procedure may require general anesthesia in some cases because it can be painful or unpleasant. Statistics in this report cover the cystoscope data that mainly contain one endoscope (also called telescope) and accessories, like endoscope bridge (single channel), working element (double channels), forceps, sheath & obturator, cleaning rod, etc. it's worth noting that statistics in this report are not cover cold light source, imagine system, etc. that usually had higher price.

SCOPE OF THE REPORT:

This report focuses on the Cystoscope in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. In the coming years there is an increasing demand for Cystoscope in the regions of US and Europe that is expected to drive the market for more advanced Cystoscope. Increasing of the hematuria, urinary tract stones, bladder cancer and stable rise in aging population will drive growth in United States and Europe markets. The product average price declined in the past few years due to the technology development, the average price will keep the trend in the few future years due to increasing mature manufacturing technology and lowing cost of raw materials. The impact on the cost and availability of raw materials and certain components is

uncertain due to potential supply changes. The costs of raw materials have a significant impact on the level of expenses. If the prices of raw materials and related factors such as energy prices increase, and if new companies cannot pass those price increases on to customers, their results of operations and financial condition would suffer.

The worldwide market for Cystoscope is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
