Abstracts

This report studies the di-isononyl phthalate (DINP) market. Diisononyl phthalate (DINP) is a phthalate ester primarily used as a general purpose plasticizer. Plasticizers increase the softness and flexibility of polymeric materials. Over 95% of the DINP produced is used to improve the flexibility, pliability and elasticity of a variety of polyvinyl chloride (PVC) products.

SCOPE OF THE REPORT:

This report focuses on the Di-Isononyl Phthalate (DINP) in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Di-Isononyl Phthalate (DINP) is a major substitute for Di (2-ethylhexyl) phthalate (DOP) in most flexible PVC applications. Price difference between those two products is little. DINP is mainly used as plasticizer for PVC industry. In 2017, PVC plasticizer consumed about 1382 MT DINP.

Global major production regions are China, North America and Europe. Europe is the largest production region, as also the largest consumption region. In 2017, Europe produced 515 K MT and consumed 542 K MT.

In China, there were many suppliers. While limited by raw material resource, most company had stopped production. As manufacturing unit of DOP and DINP can be sharing, most DOP manufacturers can also produce DINP when customer need.

The worldwide market for Di-Isononyl Phthalate (DINP) is expected to grow at a CAGR of roughly 3.7% over the next five years, will reach 2570 million US\$ in 2023, from 2070 million US\$ in 2017, according to a new GIR (Global Info Research) study.
