Dimethyl carbonate or DMC ($\text{CH}_3\text{OC}(\text{O})\text{OCH}_3$) is a non-toxic organic compound, which has versatile properties and exhibits high reactivity to chemicals and metals. It is generally colorless, flammable, and distinguished as a carbonate ester.

Scope of the Report:

This report focuses on the Dimethyl Carbonate in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. DMC is highly popular among various end-users due to its eco-friendly nature and low price. It is also used as a fuel additive and can replace ethanol due to its low toxicity, low vapor pressure, high boiling point, non-hygroscopic, and fully miscible components. DMC is more beneficial in comparison to other methylating reagents such as iodomethane and dimethyl sulfate due to its biodegradability property. Manufacturers are now producing DMC from catalytic oxidative carbonylation of methanol with carbon monoxide and oxygen, which is non-toxic in nature unlike phosgene.

The dimethyl carbonate market is highly concentrated and characterized by the presence of few key players. A large number of small start-ups are trying to enter the market. The technological advances and competitive prices of the products will strengthen the competitive scenario of the market. Companies are trying to survive in the market and grow popular with time through heavy investments in research and developmental activities.

China and Japan are the major contributors to the growth in the DMC market in APAC. The presence of key manufacturers in China makes it the top producer and consumer of DMC in the world. The automotive and electric and electronics segments are flourishing

in the region due to the high disposable income of consumers. In addition, the demand for DMC-based polycarbonate will continue to increase in the automotive segment due to its low scratch-resistance.

The worldwide market for Dimethyl Carbonate is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
