SCOPE OF THE REPORT:

This report focuses on the Drinking Fountains in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

In the coming years there is an increasing demand for Drinking Fountains (Water Dispensers) in the regions of US and Europe that is expected to drive the market for more advanced Drinking Fountains (Water Dispensers). Increasing of commercial fields expenditures, more-intense competition, launches in introducing new products, increasing of spending on home use, retrofitting and renovation of old technology, increasing adoption of Drinking Fountains (Water Dispensers) will drive growth in United States and Europe markets. However, China still account for the biggest market share in the world.

Globally, the Drinking Fountains (Water Dispensers) industry market is low concentrated as the manufacturing technology of Drinking Fountains (Water Dispensers) is relatively matures than some high-tech equipment. And some

enterprises, like Midea, Angel, Qinyuan, etc. are well-known for the wonderful performance of their Drinking Fountains (Water Dispensers) and related services. At the same time, China, occupied 81.98% production market share in 2015, is remarkable in the global Drinking Fountains (Water Dispensers) industry because of their market share and the lower cost of the raw material and labor.

The consumption volume of Drinking Fountains (Water Dispensers) is related to downstream industries and global economy. As there will always be some uncertain in the global economy in the following years, the growth rate of Drinking Fountains (Water Dispensers) industry may not keep that fast. But it is surely forecasted that the market of Drinking Fountains (Water Dispensers) is still promising.

The product average price declined in the past few years due to the technology development, the average price will keep the trend in the few future years due to increasing mature manufacturing technology and lowering cost of raw materials.

The impact on the cost and availability of raw materials and certain components is uncertain due to potential supply changes. The costs of raw materials have a significant impact on the level of expenses. If the prices of raw materials and related factors such as energy prices increase, and if new companies cannot pass those price increases on to customers, their results of operations and financial condition would suffer.

Although the market competition of Drinking Fountains (Water Dispensers) is fierce globally, there are many enterprises can obtain considerable profit form the manufacturing and marketing of Drinking Fountains (Water Dispensers) and that is the reason that we believe there will also be enterprises enter this market. But it is suggested that enterprises those have plans to enter this industry have careful analysis of this market and the advantages or disadvantages of themselves.

The worldwide market for Drinking Fountains is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
