Abstracts

Dyes are intensely colored or fluorescent organic substances only, which impart color to a substrate by selective absorption of light. They are soluble and / or go through an application process which, at least temporarily, destroys any crystal structure by absorption, solution, and mechanical retention, or by ionic or covalent chemical bonds. Organic pigments are colored, black, white or fluorescent particulate organic solids which usually are insoluble in, and essentially physically and chemically unaffected by, the vehicle or substrate in which they are incorporated. They alter appearance by selective absorption and/or by scattering of light. Organic pigments are usually dispersed in vehicles or substrates for application, as for instance in the manufacture of inks, paints, plastics or other polymeric materials. Organic pigments retain a crystal or particulate structure throughout the coloration process.

SCOPE OF THE REPORT:

This report focuses on the Dyes & Organic Pigments in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Rising textile production - the textile market accounted for more than half of world dyes and organic pigments demand in 2014 - will be the primary contributor to increased demand going forward. However, increased consumer demand will also contribute to above average growth in organic pigments demand in plastic products. Dyes and organic pigments consumption will remain concentrated in the Asia/Pacific region, where the majority of world textiles and consumer plastic products are manufactured. China will remain the dominant consumer of dyes and organic pigments. In addition, consumer preferences for new, unusual colors that don't fade, and yet are

environmentally friendly, will boost growth in value demand as textile producers increasingly turn to newer, higher value products.

The main application of organic pigments is pain, driven primarily by strong demand in construction in North America and continued growth in the Asia/Pacific region. As in other applications, more expensive products that afford greater coloring power and yet remain environmentally eco-friendly will increase.

The worldwide market for Dyes & Organic Pigments is expected to grow at a CAGR of roughly -0.6% over the next five years, will reach 9980 million US\$ in 2023, from 10400 million US\$ in 2017, according to a new GIR (Global Info Research) study.
